Quantyx

The Daily Me: a private newspaper for your inner life, live on the App Store

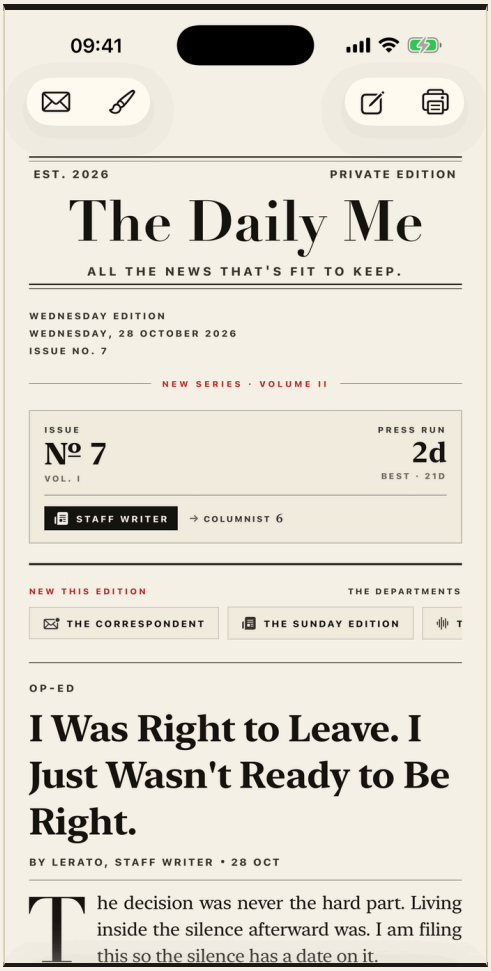

THE PROBLEM

Journal apps ask for entries. The Daily Me's store listing argues the real friction is the distance between having a thought and having somewhere to put it. Its answer is to treat each piece of writing as a story filed into your own paper, laid out as a broadsheet and, per its store listing, private by default.

WHAT WE BUILT

- Five story sections (op-ed, letter, editorial, obituary, breaking) filed onto a broadsheet front page with masthead, lead story and columns.
- The Spread: one edition set across two facing pages with a fold when a device opens wide; checked on the iPhone Duo simulator.
- Daily prompts in themed packs, plus volumes that bind archived issues.
- An Editor-in-Chief feature using Apple's on-device Foundation Models, where the device supports it.
- Optional Couples sharing and sync through the user's own iCloud; sync is off by default.
- Face ID lock, share-as-clipping export, a Lock Screen widget and Control Centre controls.

> *You don't write entries. You file stories into your own paper.*
> THE DAILY ME, APP STORE DESCRIPTION

Front page, iPhone 17 Pro Max simulator frame.

CRAFT AND QUALITY

DEVICES
iPhone, iPad and Mac, with layouts that read available space; the two-page Spread was tested on the iPhone Duo simulator.

TESTS
370 unit tests and a UI test.

ACCESSIBILITY
VoiceOver labels and Reduce Motion support.

5	3	370	2
STORY SECTIONS	DEVICE FAMILIES	UNIT TESTS	PLATFORMS LIVE

STATUS

Live and free on the App Store for iOS (3.2.1) and Mac (1.6). apps.apple.com/za/app/id6767688832

Limits. We publish no download, rating or revenue figures. Duo layouts were tested on the simulator, not a physical device. Privacy of sync and Couples sharing is by design (the store text says so); it is not independently audited. Verified against source code and App Store Connect, 22 Nov 2026; evidence on request.

WHAT IT SHOWS A CLIENT

- You get a consumer app already live on both Apple stores: iOS and Mac, free, with a distinctive broadsheet identity.
- You get layouts that adapt to a fold: one edition across two facing pages, checked on the iPhone Duo simulator.
- You get on-device Apple Foundation Models used where the device supports them, and, per the store listing, sync off by default.
